Your round 3 pin socket

Your round 3 pin socket is suitable for indoor use only; and only for connection to a lighting supply circuit (NOT a ring main). The socket fits a standard UK single gang wall box and is rated at a maximum of 5 Amps. The wall box should have a minimum of 25mm depth to allow enough space for connections once the socket is screwed into place.

Note: This product must be installed in accordance with local building regulations.

IMPORTANT: If you are in any doubt, STOP and seek professional help. Do not proceed unless you are sure.

If fitted, remove the front cover from your socket. Insert a small flat blade screwdriver into one of the base slots and carefully prise off the front cover.

To fit your round 3 pin socket

1. Ensure that the mains supply to the circuit is isolated.
2. Remove the two screws securing the existing socket.
3. Disconnect the wires from the existing socket and remove it from the installation.
4. Connect the wires to your new socket according to the colour coding shown below right.
5. Ensure that the bare copper earth connection has a green/yellow sleeve to isolate it from the other connections. Check that screw terminals are properly tightened and no bare wires are visible.
6. Use the two supplied screws to fix the panel in place to the wall box.
7. Finally, fit the front cover onto the panel so that it clips into securely into place, concealing the fixing screws.

**WARNING** Never take risks with electrical safety. Always disconnect the mains power before beginning any electrical work and test that it is isolated - it is NOT enough just to turn off the light switch. Electrical products must be installed in accordance with IET regulations (BS 7671). If you are in any doubt, always consult a qualified electrician or an experienced person registered with an electrical Competent Person Scheme. Further information is available online or from your Local Authority. If the lighting circuit is not protected by a Residual Current Device (RCD) then the installation should be carried out and tested by a qualified electrician. If necessary, use a suitable stepladder, but first read the useful advice given by the Health and Safety Executive. Visit www.hse.gov.uk and search for ‘using stepladders’.
